APPLICATION GUIDELINES

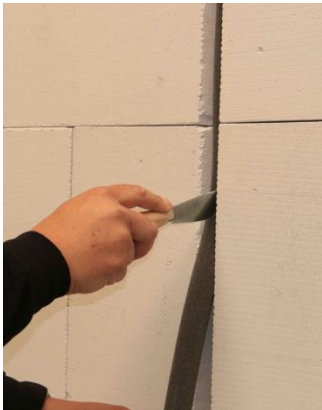

Zwaluw FireProtect FP Silicone Sealant

FP Silicone Sealant can easily be applied with a professional caulking gun.

Situation A: Single or double sided sealing of the joint with FP Silicone Sealant

1. Clean from dust with a soft brush and remove loose particles. When needed pre-treat the joints with a primer for porous substrates.

2. Place backer rod at the right depth.
Joint width/3 + 6 mm = joint depth
Example: 15mm/3 = 5+6mm = 11mm depth

3. Apply FP Silicone Sealant to the backer rod and make sure the joint is completely filled with material.

Den Braven

4. Finish the joint with a spatula or fingers moistened with Zwaluw Mixed Finisher.

5. Repeat steps 1 to 4 on the other side when the joint needs to be sealed on both sides.
6. The joint is now fire retardant and securely sealed with FP Silicone Sealant.
